

Sprint review week 1

This was the first week of the project. The first day was to set up the project, meet each other and make to make the group contract. For the requirements of the week, we already have the code. We have chosen the code of the individual assignment from Mikhail. The things we have done during the rest of the week, we will list below.

Tasks completed

- Agenda meeting Friday
- Reading the manual group assignment
- Add comments to the code
- Implemented basic modules for the Protoss Forge building
- Fixed some issues with the setup and the repo
- Implemented to build Zealots
- Implemented to build gateways
- Google doc for personal information and log hours

The communication we use is described in the contract, this week has been great at this aspect. The communication went smooth in- and outside contact hours.
